

Your Software Specialist for Elevator and Escalator Planning

We owe our specialization to a stroke of luck...

When we established DigiPara 1989, we could not predict with such a fascinating industry, how quickly the company would grow. In the first few years, we developed a 2D parametric program for AutoCAD. We then determined that this program could be used for the elevator industry. In 1996, we decided to fully concentrate on the elevator market niche.

This was the correct decision that we knew our customers would also appreciate. In 2000, we obtained several large customers who also needed software for escalator drawings. This brought us to developing a program for the escalator industry.

Due to this, DigiPara has been become a worldwide software specialist in elevator and escalator planning.

Made in Germany – from Frechen to all over the world...

The company headquarters are located in Frechen, Germany near Cologne, but we are working as an international team. The programs we have developed are used worldwide. "Made in Germany" in our case stands for a distinct knowledge in elevator and escalator technology. We are using state-of-the-art software development tools and develop in programming languages like: C++, C#, ASP.NET, Java and VB.NET.

Due to our professional specialized software, many notable international companies use our software. Large companies such as Otis, Schindler, Kone and ThyssenKrupp use our products worldwide – approximately 2,000 DigiPara licenses. More than 500 licenses are in use at small to medium companies. One customer of ours, provides about 150,000 quotation drawings per year with LIFTdesigner.

"All Elevator companies worldwide use DigiPara's Software": We are getting closer to our goal day by day.

We want to make our customers happy...

... by making their job easier. Whoever finds our slogan to be over exaggerated, should take a quick look at our consultation, assistance and support.

We speak the same language as our customers regardless of which country they live in. We understand their requests and problems because we know elevators and escalators inside out. So we can always offer the best solution. A good example: Some of our customers use LIFTdesigner to receive their ISO-9001 certifications. LIFTdesigner also guarantees the EN-81 calculation and drawing processes.

The future is relying on us for our innovations: We are already working on new products as we constantly improve the existing programs.

Products of DigiPara grow with the industry...

We develop our software in a very customer oriented way, as it keeps up with the growing demands of the industry. Our portfolio over the years has really expanded. DigiPara currently offers the following programs:

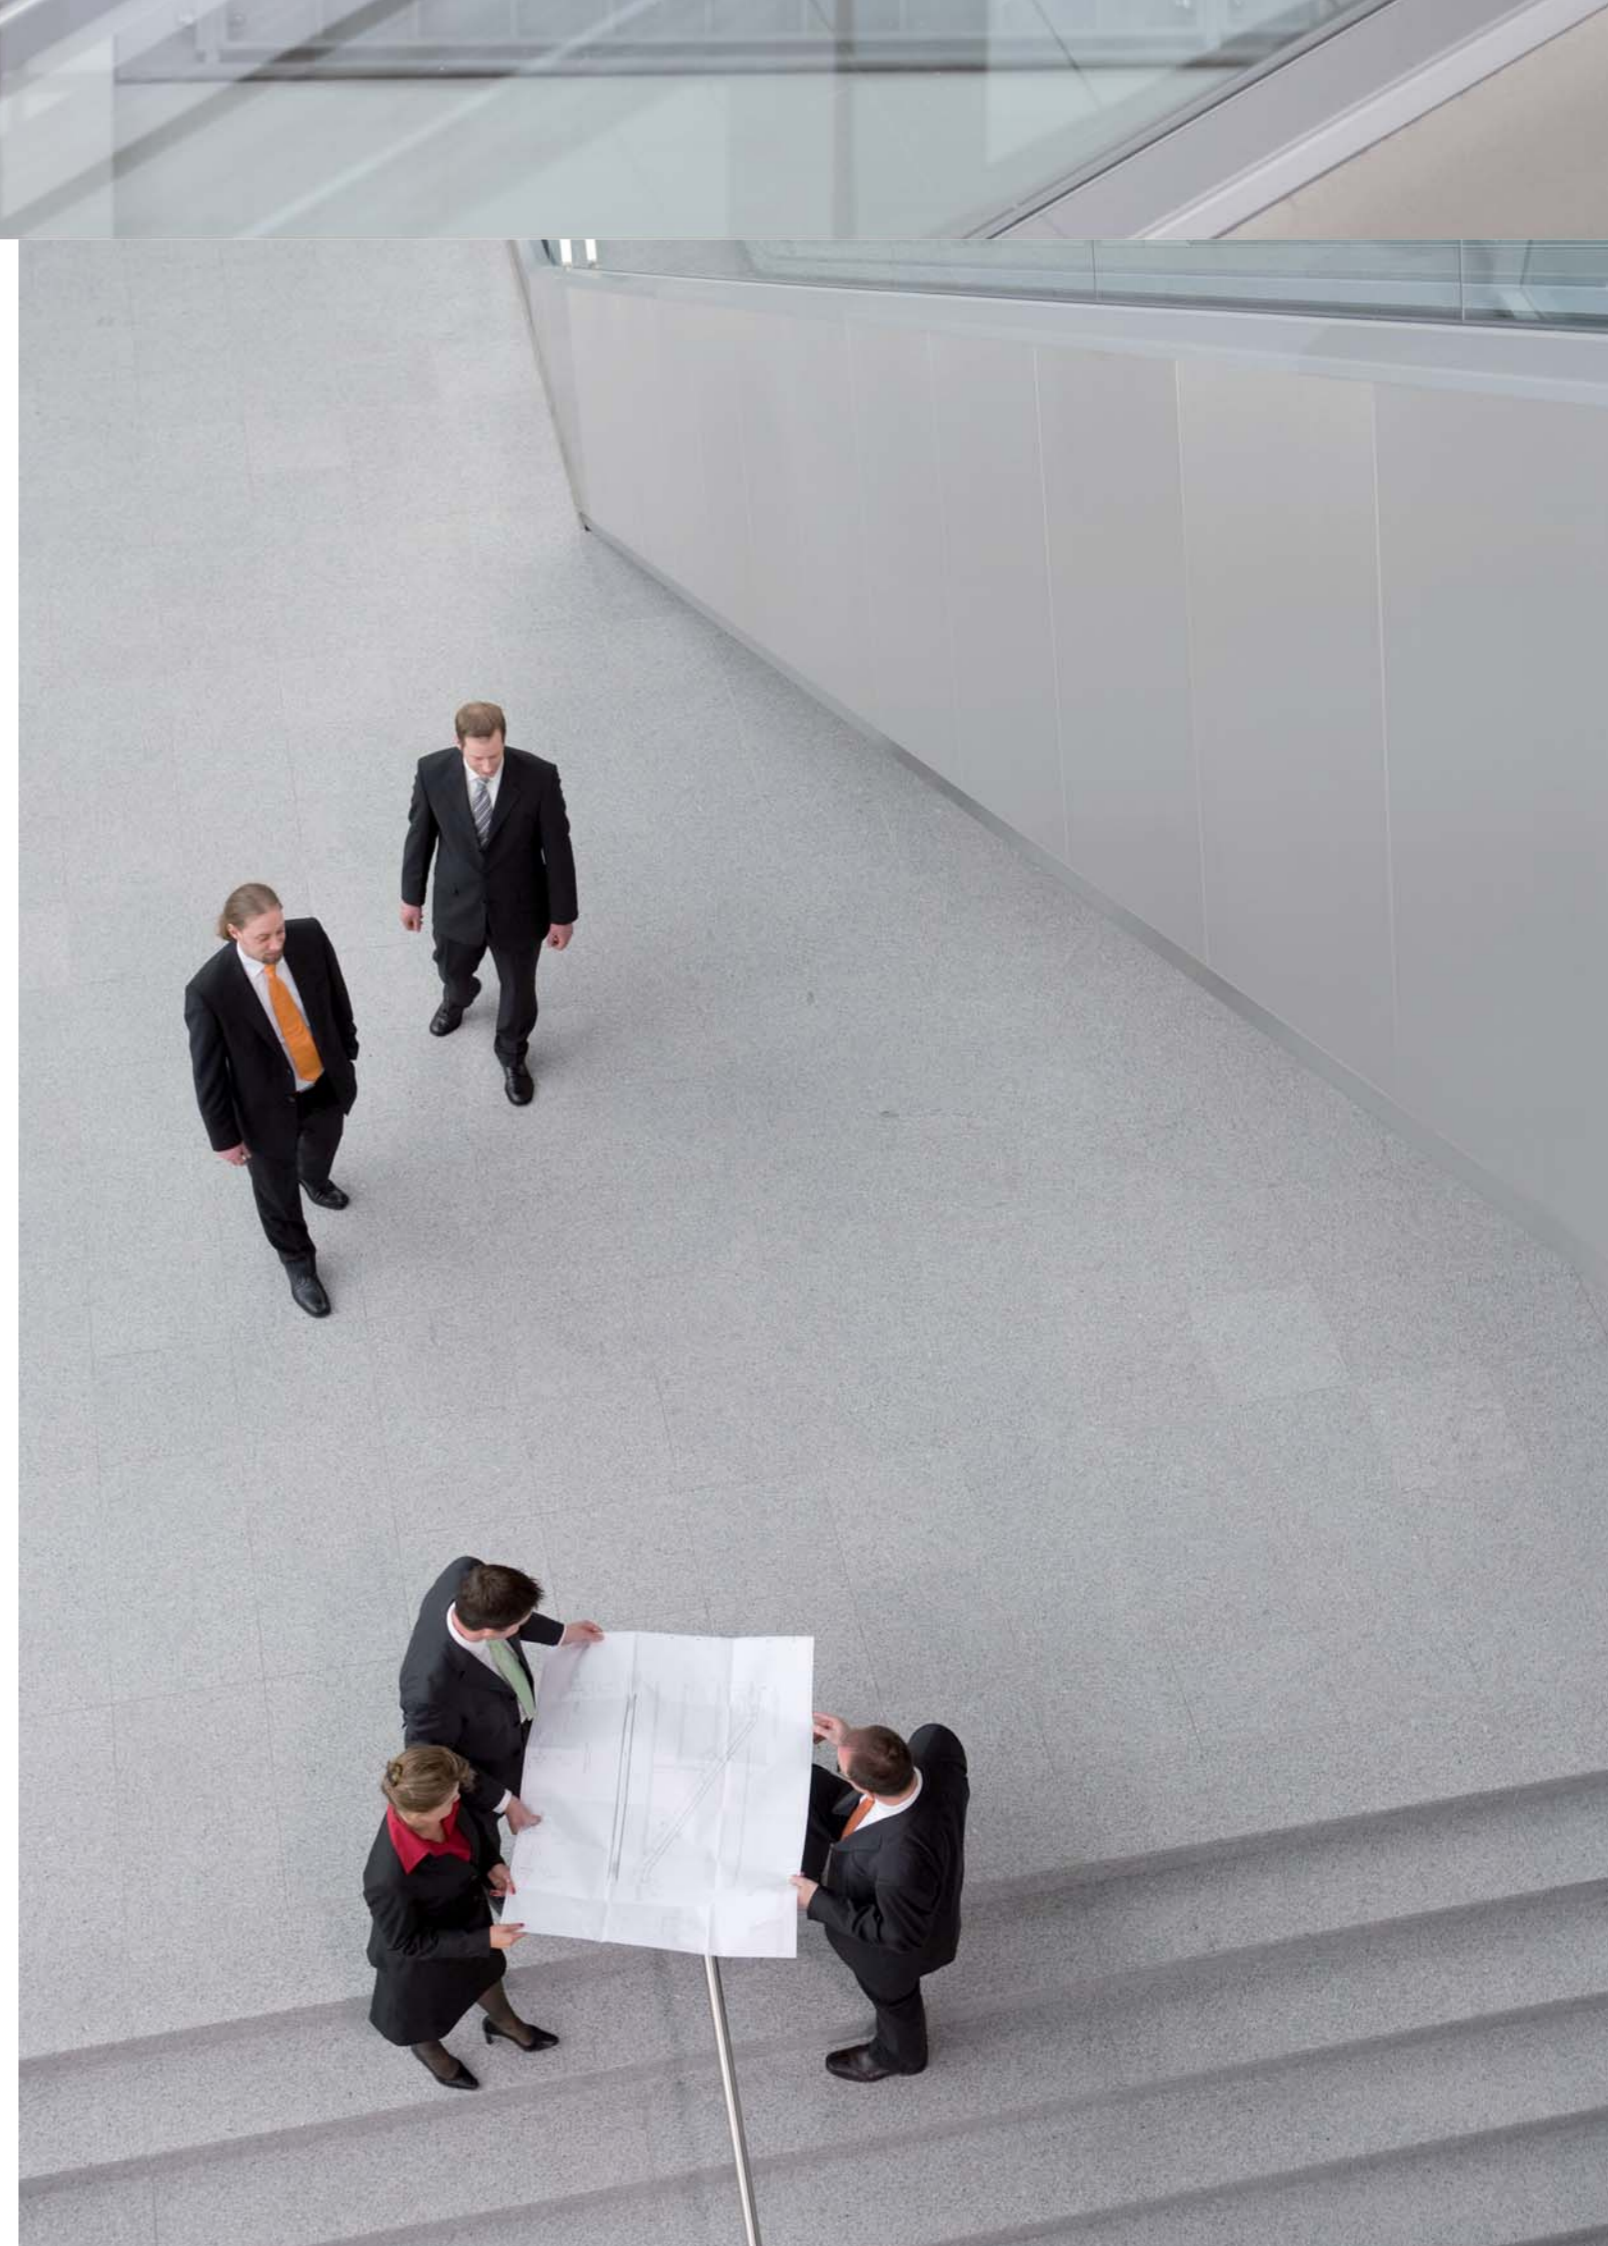

LIFTdesigner – Software to design elevators

CABINdesigner – Software to design cabin interiors

ESCALATORdesigner – Software to design escalators

DigiPara's software saves time by providing quotation drawings from A to Z by just pushing a button. All programs are easy to use and are available as a Web application that can be individually adapted to the clients needs.

Our slogan "elevate your software" brings it right to the point. Improve your software: with company owned software, develop further with our prefabricated software, which is quick and simple to customize.

What drives us is pure passion...

Different teams at DigiPara work on developing the software, maintaining the libraries (index of suppliers for elevator parts) and the Sales team. Of course, we appreciate the input of our customers. Flat hierarchies provide short reaction times. DigiPara's founder Andreas Fleischmann is available as a point of contact.

An advantage of our highly specialized development team is the years of experience in the elevator and escalator industry. Therefore, our customers can trust us with their daily tasks. Dynamic, teachable, reliable: We are a committed team that always searches for improvement.

We look forward to each type of challenge as our company history is the best proof.

We know our customers personally...

Whether it is consulting, training, automation or individual project help, personal contact is important to us. In addition, our customers appreciate the price performance ratio of our high value products.

We have more than 500 customers that are either small to medium elevator companies, consultants, installation companies as well as international enterprises. Our software supports designers, engineers and salesmen in getting their work done faster.

Here is a selection of quotations from our satisfied customers:

"**Schindler** uses LIFTdesigner worldwide to generate inquiries, quotation drawings and to design elevator drawings. We use the software for elevator and escalator drawings. We have installed LIFTdesigner on more than 700 company computers and we generate more than 500 drawings per day."

(Schindler Informatik AG, CAD-Consultant, Daniel Bannwart, Ebikon, Switzerland)

"With LIFTdesigner we at **ThyssenKrupp** have an innovative product, together with outstanding service for the optimization of our processes"

(Werner Fuchs, Lead of strategic development, ThyssenKrupp Aufzugswerke, Neuhausen, Germany)

"Since **Otis** entered a relationship with DigiPara back in 2000, customer service has been phenomenal. DigiPara's quick response to questions, overall customer support and willingness to provide training has been second to none."

(Scott Anderson, Mgr. Automation Development, Otis Elevator – NSAA Engineering, USA)
